Everton Resources is a well funded junior exploration company with properties in Ontario, the Dominican Republic and Quebec. The Company provides investors with an exceptional portfolio of active projects in three separate and distinct emerging gold districts.

ONTARIO

In September 2009, Everton acquired Hays Lake Gold Inc., a private mining exploration company with various options to acquire a consolidated land package (38 km²) located in the Shoal Lake area, near Kenora, Ontario. The Shoal Lake Gold Project is comprised of two significant high grade gold deposits with an in-situ NI 43-101 compliant indicated resource of **416,000 oz of gold** and an inferred resource of **282,000 oz of gold**; including the Cedar Island gold deposit located on the mainland (SLE) and the nearby Duport gold deposit located on Stevens Island (SLW). Everton believes that the Shoal Lake package of properties hosts a significant gold target with excellent potential to increase the estimated gold resources through additional exploration. Everton intends to aggressively drill the Shoal Lake Gold Project to increase the resource estimates.

Shoal Lake West (SLW) – Gold – option to acquire 75%. In 2006, Indicated Mineral Resources were estimated at **424,000 tonnes grading 13.40 g/t Au for 182,000 oz of gold**. In addition, Inferred Mineral Resources were estimated at **387,000 tonnes grading 10.69 g/t Au for 131,000 oz of gold**. To date, most of the work on SLW has been concentrated in the area of the known zones at the Duport gold deposit. A combined airborne magnetic and electromagnetics survey flown in 2005 identified several anomalies within prospective lithologies which have yet to be drill tested. The potential exists to increase the resource base through the discovery of additional zones along strike and at depth. **Status:** Complete an IP survey over the 1km wide Duport corridor and additional drilling to increase resources.

Shoal Lake East (SLE) – Gold – option to acquire 100%. In 2003, a mineral resource estimate on the Cedar Island gold deposit was completed in accordance with NI 43-101 guidelines, resulting in an indicated mineral resource estimate of **1,096,000 tonnes grading 6.63 g/t Au for 234,000 oz of gold** and an inferred mineral resource estimate of **832,000 tonnes grading 5.63 g/t Au for 151,000 oz of gold**. **Status:** An updated NI 43-101 Report is in progress, incorporating an additional 35 deep drill holes for 10,011 meters where significant drill results were generated in a 2004 program, ranging up to **22.0 g/t Au over 9.2 m**. All veins are open at depth and along strike west of the of the Cedar Island gold deposit.

DOMINICAN REPUBLIC

Everton holds the mineral rights to 382 km² in the Dominican Republic, including a large land position adjacent to Barrick (60%) & Goldcorp's (40%) Pueblo Viejo gold deposit where a total reserve and resource calculation of 22.4 million ounces of gold, 455 million pounds of copper and 131.3 million ounces of silver was announced in February 2009.

Ampliacion Pueblo Viejo – Gold – option to acquire up to 65% from Linear Gold (LRR). Adjacent to the northern edge of the world-class Pueblo Viejo gold mine. Trench results graded **6.65 g/t Au** and **18.8 g/t Ag** over **22m**. Field follow-up on soil anomalies led to the discovery of a new mineralized zone at La Lechoza West. **Status:** Integrating recent drill results with the existing dataset. Second phase of drilling is in progress.

QUEBEC

Everton also holds approximately 699 km² in the Opinaca region of Quebec, around the Eleonore gold discovery which was acquired by Goldcorp in 2006 for approximately \$500 million (total resource, all categories: estimate of 5.3 million ounces of gold.)
